1. Executive Summary

Joboro.ai is an AI-powered recruitment platform headquartered in Delaware, USA. It is designed to streamline and accelerate the end-to-end hiring process for companies of all sizes — from startups to enterprises — by automating candidate screening, interviewing, and pipeline management using artificial intelligence.

The platform promises a 10x faster hiring cycle and 5x return on investment by replacing manual screening with AI-driven workflows, reducing time-to-hire from weeks to 48–72 hours for a qualified shortlist.

This Business Requirements Document (BRD) defines the functional and non-functional requirements, stakeholders, constraints, and success criteria for the Joboro platform.

2. Project Overview

2.1 Problem Statement

Traditional recruitment is slow, costly, and prone to bias. Companies spend significant resources on:

- Manual resume screening that is time-consuming and inconsistent
- Scheduling and conducting multiple rounds of interviews
- Managing candidate pipelines across disconnected tools
- Unconscious bias leading to poor diversity outcomes
- High cost-per-hire due to reliance on staffing agencies and job boards

2.2 Proposed Solution

Joboro addresses these challenges by providing a unified AI-powered platform with:

- Automated resume parsing and eligibility screening
- AI-conducted video and audio interviews with 360° candidate evaluation
- Customizable multi-stage screening workflows
- Seamless ATS integrations, job board syndication, and team collaboration tools
- Predictive analytics and bias-control mechanisms

2.3 Target Users

User Type	Description	Primary Need
Hiring Managers	Tech companies, startups, enterprises	Fast, quality shortlists
HR Recruiters	In-house HR teams	Pipeline management & automation
Job Seekers / Candidates	Active job seekers across domains	Fair, transparent screening

Platform Admins	Joboro internal operations team	System configuration & monitoring
-----------------	---------------------------------	-----------------------------------

3. Scope

3.1 In Scope

- Job vacancy posting and distribution to external job boards
- AI-powered CV parsing and candidate ranking
- Configurable multi-stage screening workflows (written tests, AI interviews, human interviews)
- AI audio and video interviews with domain, cognitive, language, and non-verbal competence scoring
- Candidate pipeline management (Kanban view, smart filters, candidate tagging)
- Team collaboration features for hiring panels
- ATS integration and onboarding sync
- Hiring analytics, audit trails, and compliance reporting
- Dual portal: Recruiter dashboard (hire.joboro.ai) and Candidate portal (work.joboro.ai)
- Career page builder for employer branding
- Pre-vetted talent pool access

3.2 Out of Scope

- Payroll processing and employee management post-hire
- Learning management or employee training systems
- Internal performance management tools
- Direct background check services (third-party integrations only)

4. Functional Requirements

4.1 Core Modules

FR-01: Job Vacancy Management

Requirement ID	Description	Priority
FR-01.1	Allow recruiters to create, edit, and publish job postings	High
FR-01.2	AI-generated job descriptions based on role inputs	High

FR-01.3	Syndicate postings to external job boards with one click	High
FR-01.4	Support career page builder with employer branding	Medium
FR-01.5	Set knockout criteria to auto-disqualify ineligible candidates	High

FR-02: Candidate Screening & Evaluation

Requirement ID	Description	Priority
FR-02.1	Parse and extract structured data from uploaded CVs/resumes	High
FR-02.2	Score and rank candidates based on role criteria	High
FR-02.3	Administer written tests with configurable questions	High
FR-02.4	Conduct AI-powered audio and video interviews	High
FR-02.5	Evaluate candidates on domain, cognitive, language, and non-verbal competence	High
FR-02.6	Apply bias control mechanisms to scoring algorithms	High
FR-02.7	Support skill-based scoring and custom evaluation rubrics	Medium

FR-03: Pipeline & Workflow Management

Requirement ID	Description	Priority
FR-03.1	Multi-stage configurable hiring pipeline	High
FR-03.2	Kanban view of candidate pipeline stages	Medium
FR-03.3	Smart filters for searching and sorting candidates	High
FR-03.4	Candidate tagging and grouping	Medium
FR-03.5	Timeline tracking for each candidate's journey	Medium
FR-03.6	Pipeline automation and AI-driven follow-up messages	High
FR-03.7	Auto-reminders for pending actions	Medium

FR-04: Interview & Scheduling

Requirement ID	Description	Priority
FR-04.1	Automated interview scheduling with calendar integration	High
FR-04.2	AI conducts async video/audio interviews	High
FR-04.3	Support human interview coordination within the platform	High

FR-04.4	AI-generated interview insights and recommendations	High
---------	---	------

FR-05: Integrations & Collaboration

Requirement ID	Description	Priority
FR-05.1	ATS sync (bidirectional) with major ATS platforms	High
FR-05.2	Onboarding system integration post-hire	Medium
FR-05.3	Team collaboration with role-based access control	High
FR-05.4	API access for enterprise customers	Medium
FR-05.5	Third-party integrations marketplace	Low

FR-06: Analytics & Reporting

Requirement ID	Description	Priority
FR-06.1	Hiring analytics dashboard (time-to-hire, funnel conversion, etc.)	High
FR-06.2	Audit trails for all recruiter and AI actions	High
FR-06.3	Candidate-level performance reports	High
FR-06.4	AI recruitment benchmark statistics	Medium
FR-06.5	Diversity and inclusion metrics reporting	Medium

5. Non-Functional Requirements

Category	Requirement
Performance	AI interview processing and scoring completed within 5 minutes of session end
Scalability	Support bulk hiring with 1,000+ concurrent candidates per account
Availability	99.9% platform uptime SLA
Security	End-to-end encryption; compliance with GDPR, CCPA, and regional data laws
Accessibility	WCAG 2.1 AA compliance for candidate-facing interfaces
Data Retention	Configurable data retention policies per customer
Localization	Support for international hiring; multi-timezone scheduling
AI Fairness	Regular bias audits; explainability for AI scoring decisions

Response Time	Page load under 2 seconds; API response under 500ms (p95)
---------------	---

6. Key User Stories

ID	As a...	I want to...	So that...
US-01	Recruiter	Post a job and have it go live on multiple boards instantly	I reach the widest candidate pool quickly
US-02	Recruiter	Configure a multi-stage screening workflow per role	Each role gets the right evaluation depth
US-03	Recruiter	Receive a ranked shortlist within 72 hours	I can focus on final interviews only
US-04	Hiring Manager	View AI-generated insights per candidate	I make data-backed hiring decisions
US-05	Candidate	Complete an AI video interview at my convenience	I can apply without rigid scheduling
US-06	HR Admin	Sync the platform with our existing ATS	I avoid duplicate data entry
US-07	Recruiter	Track all candidate actions with an audit trail	We maintain compliance and accountability

7. Assumptions & Constraints

7.1 Assumptions

- Candidates have access to a device with a camera and microphone for AI video interviews
- Employers will provide role-specific evaluation criteria during job setup
- ATS integrations will be available via standard APIs (REST/OAuth)
- The platform will operate as a SaaS model with cloud infrastructure
- All candidates are actively job-seeking and have given consent for AI screening

7.2 Constraints

- AI models must comply with applicable employment and discrimination laws by jurisdiction
- No upfront payment model requires robust fraud prevention on the candidate side
- International data residency requirements may limit cloud region flexibility
- AI interview quality is dependent on candidate internet bandwidth and hardware

8. Success Metrics & KPIs

Metric	Target	Measurement Method
Time-to-shortlist	≤ 72 hours from job post	Platform analytics
Recruiter time savings	10x vs traditional process	User survey + time tracking
Candidate satisfaction (CSAT)	≥ 4.2 / 5.0	Post-interview survey
AI screening accuracy	≥ 90% match rate with human review	Periodic audit sample
Bias reduction	Statistically comparable pass rates across demographics	Diversity analytics
Platform uptime	≥ 99.9%	Infrastructure monitoring
ATS sync success rate	≥ 99%	Integration error logs
Customer ROI	5x within 6 months	Customer case studies

9. Risks & Mitigations

Risk	Likelihood	Impact	Mitigation
AI bias in scoring decisions	Medium	High	Regular bias audits; human review override; explainable AI scoring
Data privacy regulatory breach	Low	Critical	GDPR/CCPA compliance by design; DPA with all sub-processors
Low candidate trust in AI interviews	Medium	Medium	Transparent AI disclosure; option for human review escalation
ATS integration failures	Medium	Medium	Modular integration layer; fallback CSV export
Scalability under bulk hiring load	Low	High	Auto-scaling cloud architecture; load testing at 10x peak
Competitor feature parity	High	Medium	Accelerate unique features (bias control, 360° eval, pre-vetted pool)

10. Stakeholders

Stakeholder	Role	Responsibility
Product Owner	Internal	Owns feature roadmap and prioritisation
Engineering Lead	Internal	Technical delivery and architecture decisions

AI/ML Team	Internal	Interview models, scoring algorithms, bias control
HR / Recruiter Users	External (Customer)	Validate requirements; UAT
Candidates	External (End User)	Participate in AI screening; provide feedback
Legal & Compliance	Internal	Ensure regulatory adherence across jurisdictions
Enterprise Integration Partners	External	ATS and HRIS vendor relationships

11. Glossary

Term	Definition
ATS	Applicant Tracking System — software used by recruiters to manage candidates
AI Interview	An asynchronous interview conducted and evaluated by Joboro's AI agents
360° Evaluation	Joboro's four-pillar assessment: domain, cognitive, language, non-verbal
Knockout Criteria	Hard filters that auto-disqualify candidates who do not meet minimum requirements
Pipeline Automation	Rules-based or AI-driven actions triggered at each hiring stage
Pre-vetted Pool	Joboro's curated database of candidates who have passed baseline AI screening
BRD	Business Requirements Document — this document
SLA	Service Level Agreement — contractual commitment on platform availability/performance
